November 2020

Taxistop works on providing an **efficient mobility** for everyone by facilitating the **sharing** of vehicles and by physically and digitally **connecting** transport modes. Taxistop focuses on its **own mobility services**, **innovation** and **awareness-raising**.

'What does the mobihub of the future look like?'

Online event - December 8, 2020

On Tuesday December 8 (17h-19h), the final of the [Mobihub Student Challenge](#) takes place, a student competition about the mobihub of the future. This event provides a preview of how the next edition of Shared Mobility Rocks, the symposium on shared mobility organised by Taxistop and Autodelen.net, will look like. [You can register here for free.](#)

What's on the programme?

- The finalists pitch their ideas
- The members of the jury present their vision on mobihubs
- Award ceremony

Who's in the jury?

- Rebecca Karbaumer – Mobility expert (City of Bremen)
- Marie Mervaille – Usability expert (Namahn)
- Benoit Moritz – Architect & urbanist (ULB – Metrolab Brussels)

Together with Autodelen.net, Taxistop organises the annual Shared Mobility Rocks symposium, an unconventional and rocking conference on shared mobility. Because of the coronacrisis, the third edition is postponed until March 3-4, 2021: it will be a 24 hour conference travelling around the

Taxistop visited the mobility hubs in The Netherlands... ... and came back with a mini-documentary

At the end of September, Taxistop travelled to the Dutch provinces of Groningen and Drenthe. As part of the Interreg North Sea Region project [G-PaTRA](#), we were shown around the local mobility hubs, in all their shapes and sizes. On the way, we made a video report to inspire the mobihubs in Belgium and elsewhere. Get inspired by their approach and future vision on mobility hubs!

The conclusion of INCLUSION

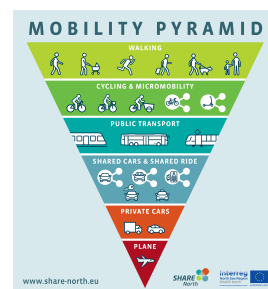

The Horizon 2020 INCLUSION project came to an end in September after three years of research. It aimed to find ways to ensure accessible and inclusive public transport for all. As a partner, Taxistop rolled out two pilot labs in Flanders focusing on jobseekers with a migration background and on less mobile and elderly people. The results and lessons learned from the different pilot labs are now [publicly available](#). Be sure to check the animated video as well!

The SHARE-North Mobility Pyramid

Within the Interreg North Sea Region project [SHARE-North](#), of which Taxistop is a partner, a mobility pyramid has recently been developed that indicates the preferable transport modes to be used in order to lower car dependency and achieve a sustainable transport system. The pyramid is different to many others of its kind as it includes shared mobility.
